ABOUT ME

I am a Full Stack Developer with over 2 years of experience building end-to-end applications using Java, modern frontend frameworks, and emerging AI/ML technologies. With strong analytical skills and a collaborative mindset, I am eager to deliver scalable, impactful software solutions across the full development stack.

TECHNICAL SKILLS

Languages	Java, Python, TypeScript, SQL
Technologies	Spring Boot, Microservices, REST APIs, Event-Driven Systems, React.js, Next.js
Databases	MySQL, PostgreSQL, Oracle, MongoDB
Platforms & Tools	AWS, Git, Docker, CI/CD (GitLab, Jenkins), Redis, Apache Kafka
Systems & Concepts	Distributed Systems, SDLC, Agile/Scrum, AI & ML
Testing	JUnit, Mockito

EXPERIENCE

Associate Software Developer – (InvisionXRStudios)

Nov 2024 – Jul 2025

Worked on designing and maintaining scalable microservices using Java and Spring Boot, where I focused on improving the performance and reliability of production systems. I also built and integrated RESTful APIs with secure OAuth-based authentication to support high-volume data processing workflows. Beyond the technical work, I actively collaborated within Agile teams, contributing to sprint planning, code reviews, and day-to-day production support to help keep things running smoothly.

Associate Software Developer – (Mavonic)

May 2024 – Aug 2024

Contributed to building full-stack applications using Spring Boot on the backend and Next.js on the frontend, playing a hands-on role in shaping a scalable microservice-based architecture. Throughout the engagement, I was involved in testing, debugging, and maintaining application quality, following SDLC best practices to ensure reliable and well-structured code at every stage of development.

Software Trainee – (Codetru)

Mar 2023 – Apr 2024

Got hands-on experience building backend services using Java and Spring Boot, working closely with relational databases like MySQL and PostgreSQL. This role gave me a strong foundation in backend development, where I learned how to design efficient data models, write clean service logic, and understand how real-world applications are structured and maintained from the ground up.

PROJECTS

Skill-Gap Analyzer - AI-Powered Resume Intelligence Platform.

Designed and developed an end-to-end machine learning application that analyzes resumes and predicts suitable job roles using NLP and BERT-based classification models. Built an intelligent recommendation system to identify missing skills and suggest relevant upskilling areas based on predicted career paths. Deployed the solution on AWS SageMaker with scalable inference endpoints and integrated the application into a production-ready cloud workflow.

Bathsense - Quotation Generation System.

Developed a quotation and product management platform for bathroom fixtures including faucets, showers, basins, and water closets. Built separate internal and external user perspectives for streamlined product browsing, quotation generation, and operational efficiency.

EDUCATION

Master of Science – Artificial Intelligence and Machine Learning

Sept 2025 – Sept 2026

University of Limerick, Ireland

Bachelor of Technology – Computer Science and Engineering

Aug 2018 – Aug 2022

JNTUH

CGPA: 7.03/10
